Flux Linkage

• When current flows through a transmission line conductor, it produces a magnetic field around the conductor.
• The magnetic field consists of magnetic flux lines surrounding the conductor.
• These magnetic flux lines link the conductor carrying the current.
• The total magnetic flux linking a conductor is called flux linkage.

Magnetic flux lines around a current-carrying conductor.

Definition

Flux linkage is the total magnetic flux that links a conductor due to the current flowing through it.

Unit: Weber-turn (Wb-turn)
